# arKaos | PRO

MediaMaster 5 express

Arkaos Media Master is a great way to run your vision on shows. Simply drop and drag your images or video loops into the Arkaos program, then manipulate them to run the way you like. You can then run them straight from your laptop or trigged by a DMX controller.

Arkaos software can be downloaded FREE and run without a license in DEMO mode. The software will be fully functional with a DEMO banner displayed on the output.   Activating the software using USB dongle will leave the DEMO mode. The dongle can be hired from Lighting Lab at a low cost when needed

Many free and low cost video loops are available on YouTube.

Dongle, used to remove DEMO from Software. Available from Lighting Lab

LED screen

DMX to USB converter (optional)

LED Screen processor

Arkaos on Laptop

DMX controller (optional)

On the Theatre Mode, MediaMaster Pro adds a fixture-based operation mode and support for MSEX allowing thumbnails preview and live output to the console screens.

The fixture profiles allows total control of every MediaMaster parameter straight from the DMX console and turns any powerful computer into a traditional Media Server for professional lighting consoles such as ChamSys, Avolites, LSC, ETC, GrandMA, Martin, Compulite, etc.
